Revision History

Date	Description	Revision
2023-05-20	**First Released**	**V1.0**

Chapter 1. Introduction

1.1. Introduction

The SOM-IMX8MP is a System on Module (SoM) containing processor, memory, eMMC Flash, WIFI module, Ethernet PHY and supporting power circuitry. The SoM is based on NXP i.MX8M Plus series processors, and can be easily used by a designer in their own products and systems, help customers to bring their products into market quickly.
The electrical interface of SoM is via two 100-pin high density BTB connectors and two 30-pin high density BTB connectors, and the signal definition of two 100-pin connectors is compatible with CM4 of Raspberry, so it could be an high performance alternative of CM4 for some products embedded in CM4.

1.2. Features

Key features of the SoM are as follows:

- NXP Quad core Cortex-A53 (ARM v8) 64-bit SoC @ 1.8GHz
- 2.3 TOP/s Neural Network performance available for user applications
- ARM Cortex-M7 Core CPU operating up to 800 MHz
- 375 Mpixel/s HDR Image Sensor Processor ISP
- Hifi4 Audio DSP, operating up to 800 MHz
- Small Footprint 55mm × 40mm × 4.7mm module
  - 4 × M2.5 mounting holes
- H.265 (up to 1080p60 encode and decode), H.264 (up to 1080p60 encode and decode)
- OpenGL ES 3.0 graphics, OpenCL 1.2
- Options for 2GB, 4GB or 8GB LPDDR4-4000 SDRAM
- Options for 8GB, 16GB, 32GB or 64GB eMMC Flash memory
  - Peak eMMC bandwidth 200MBytes/s
- 64Mb SPI Nor Flash
- Option for certified radio module with:
  2.4 GHz, 5.0 GHz IEEE 802.11 b/g/n/ac wireless
  Bluetooth 5.1, BLE
- 2 x Gigabit Ethernet controller
  - One Gigabit Ethernet controller with PHY on-board supporting IEEE 1588
  - One Gigabit Ethernet controller supporting IEEE 1588, PHY is needed on baseboard
- 1 × PCIe 1-lane Host, Gen 3 (5Gbps)
- 2 × USB 3.0 port (highspeed)
- 66 × GPIO supporting:

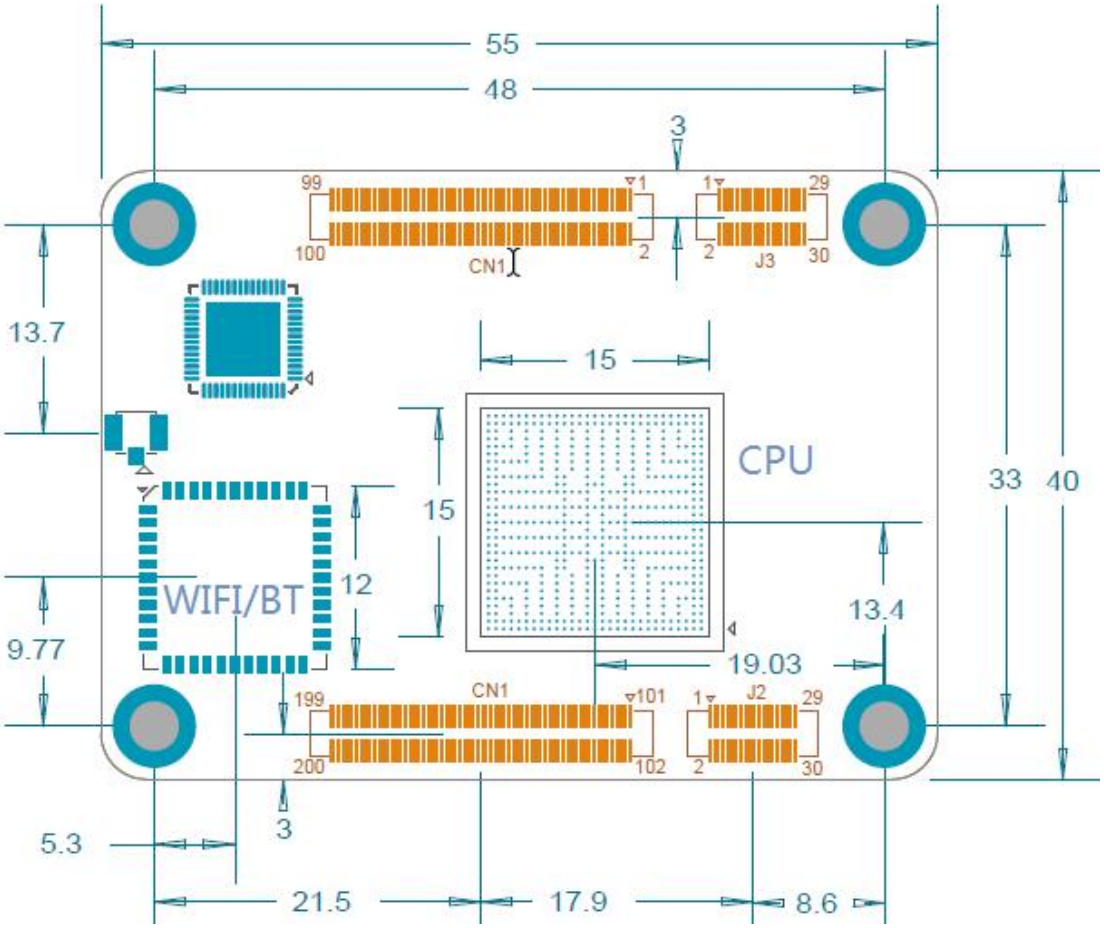
  - Up to 3 × UART
  - Up to 4 × I2C
  - Up to 2 x SPI
  - 1 x SDIO interface
  - 2 x CAN
  - 1 x PCM
  - Up to 4 x PWM channels
- 1 x HDMI 2.0a ports (up to 1920 x 1080p60 supported)
- 1 x 4-lane MIPI DSI
- 1 x 4-lane LVDS (up to approximately 1366x768p60)
- 2 x 4-lane MIPI CSI-2
- SPDIF input and output
- Five external synchronous audio interface (SAI) modules
- 8-channel PDM microphone input
- SPDIF input and output
- 1 x SDIO, eMMC 5.1
- Single +5V Power supply input.

1.3. Application

- Machine Vision and Robot Controllers
- Building Safety
- Industrial automation
- Weighing Scales
- Smart Toll Systems
- Educational Consoles
- Factory Automation
- Industrial Computers, Gateways and HMIs
- Machine Vision and Robot Controllers
- Traffic Monitors and Flow Optimization
- Vision Payment Systems
- Medical facilities

Chapter 2. Mechanical Dimension

SoM dimension as following, viewed from the Top.



Components in blue are on Top;

Components in Orange are on Bottom;

The height of WIFI/BT module is 1.7mm;

The height of CPU is 1.5mm;

A cooling solution is needed to ensure CPU of SoM to maintain an operational temperature.

The SoM's threaded standoffs can be used to mount a passive or active cooling solution.

Chapter 3. Pin Out

CN1

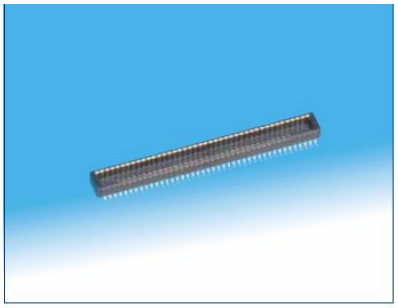
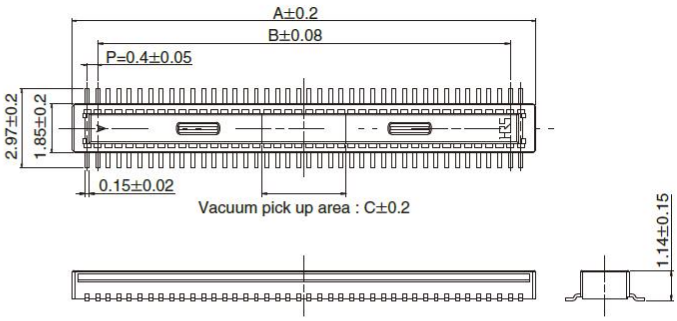
Chapter 4. Connector

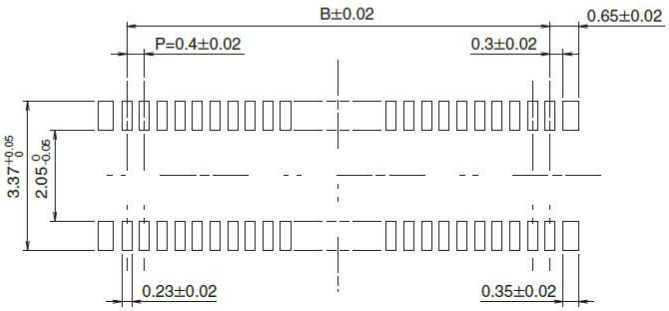
4.1. BTB connectors on SoM

The BTB connectors mounted on SoM board are DF40C-30DP-0.4V(51) and DF40C-100DP-0.4V(51) supplied by Hirose. The detail of the connectors are:





Recommended PCB layout



Unit : mm

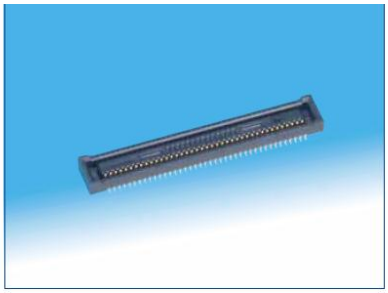
Part No.	HRS No.	No. of Contacts	A	B	C
DF40C-10DP-0.4V(51)	684-4035-0 51	10	3.52	1.6	1.0
DF40C-12DP-0.4V(51)	684-4149-9 51	12	3.92	2.0	
DF40C-20DP-0.4V(51)	684-4010-9 51	20	5.52	3.6	
DF40C-24DP-0.4V(51)	684-4011-1 51	24	6.32	4.4	1.2
DF40C-30DP-0.4V(51)	684-4012-4 51	30	7.52	5.6	1.5
DF40C-34DP-0.4V(51)	684-4024-3 51	34	8.32	6.4	2.3
DF40C-40DP-0.4V(51)	684-4013-7 51	40	9.52	7.6	3.2
DF40C-44DP-0.4V(51)	684-4077-0 51	44	10.32	8.4	
DF40C-50DP-0.4V(51)	684-4014-0 51	50	11.52	9.6	
DF40C-60DP-0.4V(51)	684-4003-3 51	60	13.52	11.6	
DF40C-70DP-0.4V(51)	684-4015-2 51	70	15.52	13.6	
DF40C-80DP-0.4V(51)	684-4001-8 51	80	17.52	15.6	
DF40C-90DP-0.4V(51)	684-4125-0 51	90	19.52	17.6	
DF40C-100DP-0.4V(51)	684-4032-1 51	100	21.52	19.6	

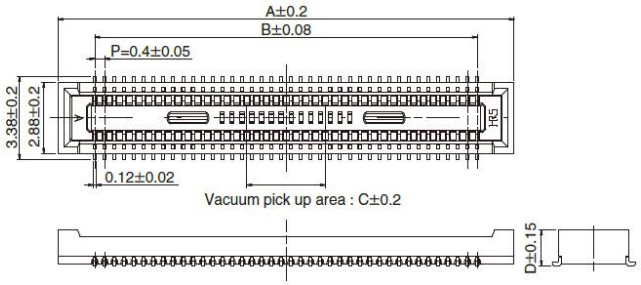
4.2. Suggested BTB connectors on base board

There are two different stacking height BTB connectors that can be mounted on base board:

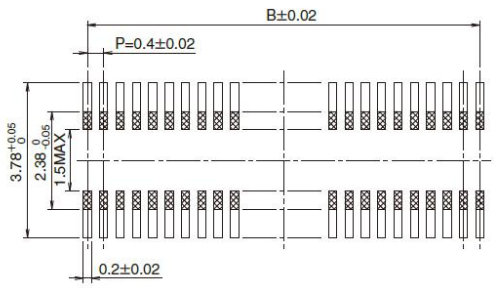
4.2.1. 1.5mm Stacking Height

Stacking Height 1.5mm;
Part Number: DF40HC-30DS-0.4V(51) and DF40HC-100DS-0.4V(51);

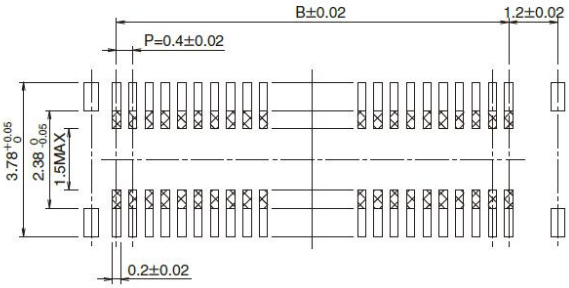




Recommended PCB layout



DF40C(Without reinforcing metal fitting)



DF40B(With reinforcing metal fitting)

Unit : mm

Part No.	HRS No.	No. of Contacts	A	B	C	D
DF40B-10DS-0.4V(51)	684-4038-8 51	10	4.6	1.6	1.0	1.45
DF40B-12DS-0.4V(51)	684-4152-3 51	12	5.0	2.0		
DF40B-30DS-0.4V(51)	684-4090-8 51	30	8.6	5.6	1.5	
DF40B-50DS-0.4V(51)	684-4018-0 51	50	12.6	9.6	3.2	
DF40B-60DS-0.4V(51)	684-4049-4 51	60	14.6	11.6		
DF40B-80DS-0.4V(51)	684-4052-9 51	80	18.6	15.6

Chapter 5. Power and Reset

5.1 Power Source

SOM only requires +5V power input (at +5V_IN of CN1). It then generates local voltage rails for all components through on-board PMIC.

- Power supply voltage : 5V +/- 0.3V
- Power supply current: 2A

5.2 Power Control and Monitoring

Power control and monitoring on SoM is implemented by using the NXP Power Management Integrated Circuit (PMIC) PCA9450CHN, designed specifically for the NXP i.MX8M Plus family of application processors.
PCA9450CHN provides Dynamic Voltage Scaling via I²C bus and/or digital input PMIC_STBY_REQ, and is accessible via I2C1 bus of i.MX8M Plus, I2C access address as following:

I2C Slave Address

7-bit Slave Address	8-bit Write Address	8-bit Read Address
0x25, 0b 010 0101	0x4A, 0b 0100 1010	0x4B, 0b 0100 1011

5.3 Power Rail In/Out

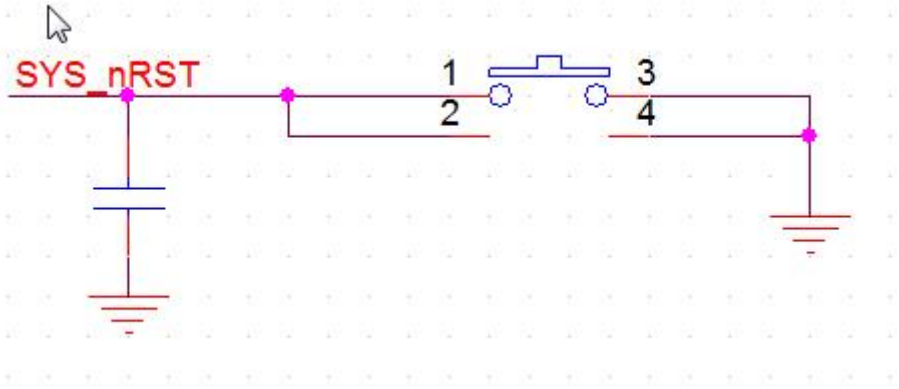
There are three power output and a power input for GPIO reference voltage via CN1 BTB connector.

Caution:

- VSD_3V3 is just for Micro SD card circuit, do not connect to any other circuit.
- VDD_3V3 can only provide 600mA current for other circuit on base board, don't connect high current beyond 600mA device or you might brownout the system.
- VDD_1V8 can only provide 600mA current for other circuit on base board, don't connect high current beyond 600mA device or you might brownout the system
- GPIO_VREF is reference power input just for some GPIOs in GPIO_VREF power domain, it must be connected to a power supply, suggest to connect GPIO_VREF to VDD_3V3 or VDD_1.8V on base board for different application.

5.4 External Reset Input

To ensure SoM work properly, suggest to connect a reset button to Pin 92 of CN1 to pull this pin to ground to reset SoM, a 10K pull-up resistor to 3.3V power supply has been installed on SOM board. Example circuit as following:



5.5 POR Reset Output

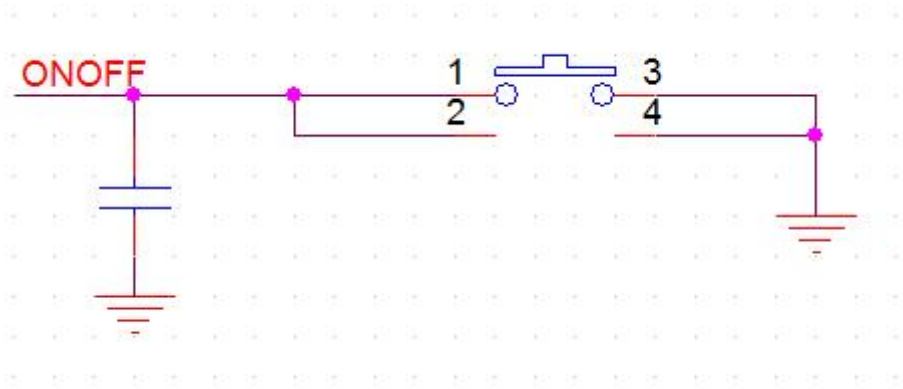
The POR reset output signal nEXTRST connects to Pin 100 of CN1, it can be used to reset other devices on base board. When PMIC is in powering up, nEXTRST keeps Low, after the power-up finished, nEXTRST will change to High, then the system starts to run.

A 10K pull-up resistor to 3.3V power supply has been installed on SOM board.

5.6 On-Off

ONOFF signal on Pin 99 of CN1 is used to turn on and off SoM, or to wake up SoM from an lower power mode.

A 100K pull-up resistor to 1.8V power supply has been installed on SOM board. Example circuit as following:



Chapter 6. Base board design guide

6.1. Trace impedance requirement

The following table lists the recommended impedance for high-speed signals on the baseboard.

Signal group	Impedance	PCB manufacture tolerance
All single-ended signal,unless specified	50 Ohm single-ended	+/-10%
PCIe colck and TX/RX data pair	85 Ohm differential	+/-10%
USB differential signals	90 Ohm differential	+/-10%
Ethernet Differential signals	100 Ohm differential	+/-10%
MIPI DSI	100 Ohm differential	+/-10%
MIPI CSI	100 Ohm differential	+/-10%
LVDS	100 Ohm differential	+/-10%

6.2. High-speed signal trace length compensation

The following table lists the trace length of high-speed signals, including MIPI CSI, MIPI DSI, PCIe, USB and Giga Ethernet. These signals are high-speed signals that require the total etched trace lengths to be equal to each other. You must incorporate the length difference on your baseboard to ensure that the trace length for all high-speed signals match each other.

Name	Etch length (mil)	Name	Etch length (mil)
MIPI CSI0			
CAM0_D0_P	459.12	CAM0_D0_N	461.26
CAM0_D1_P	471.4	CAM0_D1_N	473.96
CAM0_D2_P	1031.44	CAM0_D2_N	1026.86
CAM0_D3_P	1174.98	CAM0_D3_N	1179.38
CAM0_C_P	484.13	CAM0_C_N	488.4
MIPI CSI1			
CAM1_D0_P	532.73	CAM1_D0_N	535.88
CAM1_D1_P	447.05	CAM1_D1_N	448.68
CAM1_D2_P	294.95	CAM1_D3_N	292.39
CAM1_D3_P	368.24	CAM1_D3_N	363.46
CAM1_C_P	373.52	CAM1_C_N	378.45
MIPI DSI			
DSI_D0_P	824.5	DSI_D0_N	819.82

DSI_D1_P	831.79	DSI_D1_N	836.69
DSI_D2_P	1006.49	DSI_D2_N	1006.2
DSI_D3_P	813.07	DSI_D3_N	809.38
DSI_C_P	1178.92	DSI_C_N	1181.28
HDMI			
HDMI_TX0_P	1389.48	HDMI_TX0_N	1384.99
HDMI_TX1_P	1380.25	HDMI_TX1_N	1379.55
HDMI_TX2_P	1388.12	HDMI_TX2_N	1387.14
HDMI_CLK_P	1393.14	HDMI_CLK_N	1393.25
LVDS			
LVDS0_TX0_P	382.16	LVDS0_TX0_N	384.21
LVDS0_TX1_P	436.25	LVDS0_TX1_N	439.42
LVDS0_TX2_P	511.26	LVDS0_TX2_N	515.85
LVDS0_TX3_P	657.15	LVDS0_TX3_N	660.78
LVDS0_CLK_P	595.14	LVDS0_CLK_N	599.58
PCIe			
PCIe_CLK_P	663.57	PCIe_CLK_N	667.63
PCIe_RX_P	449.1	PCIe_RX_N	452.99
PCIe_TX_P	438.67	PCIe_TX_N	434.86
USB1			
USB1_P	333.95	USB1_N	337.34
USB1_TXP	762.29	USB1_TXN	759.5
USB1_RXP	798.09	USB1_RXN	797.6
USB2			
USB2_P	788.68	USB2_N	768.16
USB2_TXP	737.63	USB2_TXN	741.51
USB2_RXP	615.81	USB2_RXN	620.24
Ethernet			
Ethernet_Pair0_P	400.17	Ethernet_Pair0_N	404.79
Ethernet_Pair1_P	463.43	Ethernet_Pair1_N	461.46
Ethernet_Pair2_P	517.69	Ethernet_Pair2_N	521.3
Ethernet_Pair3_P	611.1	Ethernet_Pair3_N	606.7

6.3. Boot Mode

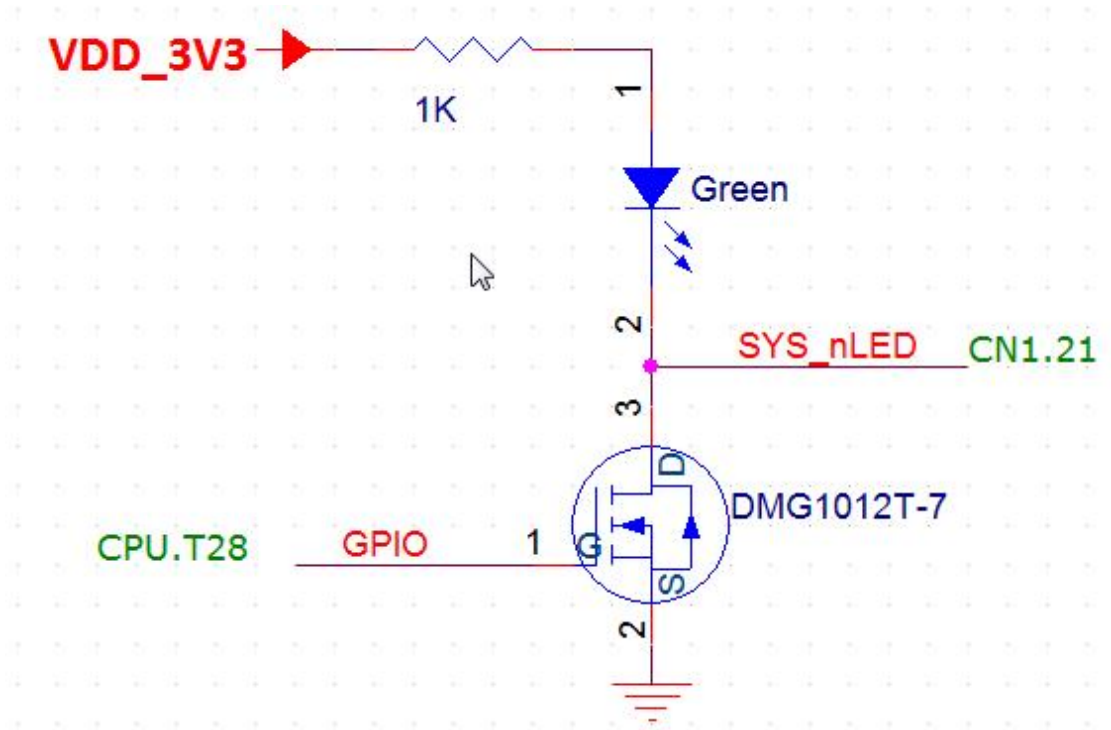
Using the BOOT_MODE[1:0] pins to configure SoM boot mode setting as indicated in the following tables. The default configuration is [10] booting form eMMC.

BOOT_MODE1	BOOT_MODE0	Boot Modes
1	*0*	*USDHC3 (eMMC boot only, SD3 8-bit)*
0	1	USB Serial Download

If the designer desires to boot the board up from any other storage device, please refer the following table to change the boot-up configuration, further information please refer toi.MX 8M Mini Applications Processor Reference Manual.
Caution:The pull-up resistor of boot configuration should be connected to VDD_3V3 from J3.
On-board eMMC: Connected to uSDHC3 8 bit
TF single on BTB connector: Connected to uSDHC2
On-board QSPI Flash: Connected to QSPI, 1.8V 64M bit QSPI flash, W25Q64FW

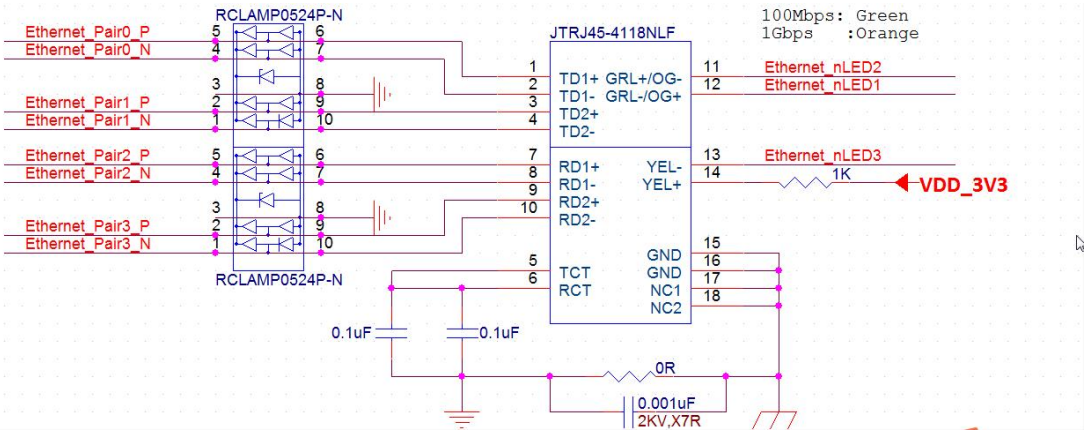
6.4. System Status LED

There is a Green LED on SoM for system status indicator, circuit as following:
The LED is controlled by GPIO of Pin T28 (GPIO3.IO16) of CPU.



6.5. Giga Ethernet

GIGA Ethernet circuit as following:



The ESD RCLAMP0524P-N is optional.

For the LED status, Yellow LED indicates link active;

Green LED indicates 100M status;

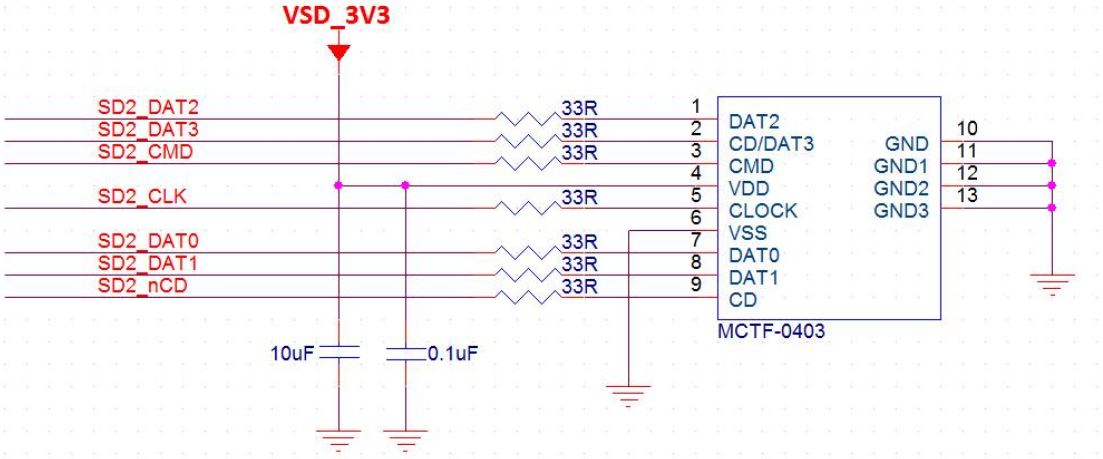
Orange LED indicates 1000M status;

Symbol	10M Link	10M Active	100M Link	100M Active	1000M Link	1000M Active
LED_10_100	OFF	OFF	ON	ON	OFF	OFF
LED_1000	OFF	OFF	OFF	OFF	ON	ON
LED_ACT	ON	BLINK	ON	BLINK	ON	BLINK

NOTE: Notes: on = active; off = inactive

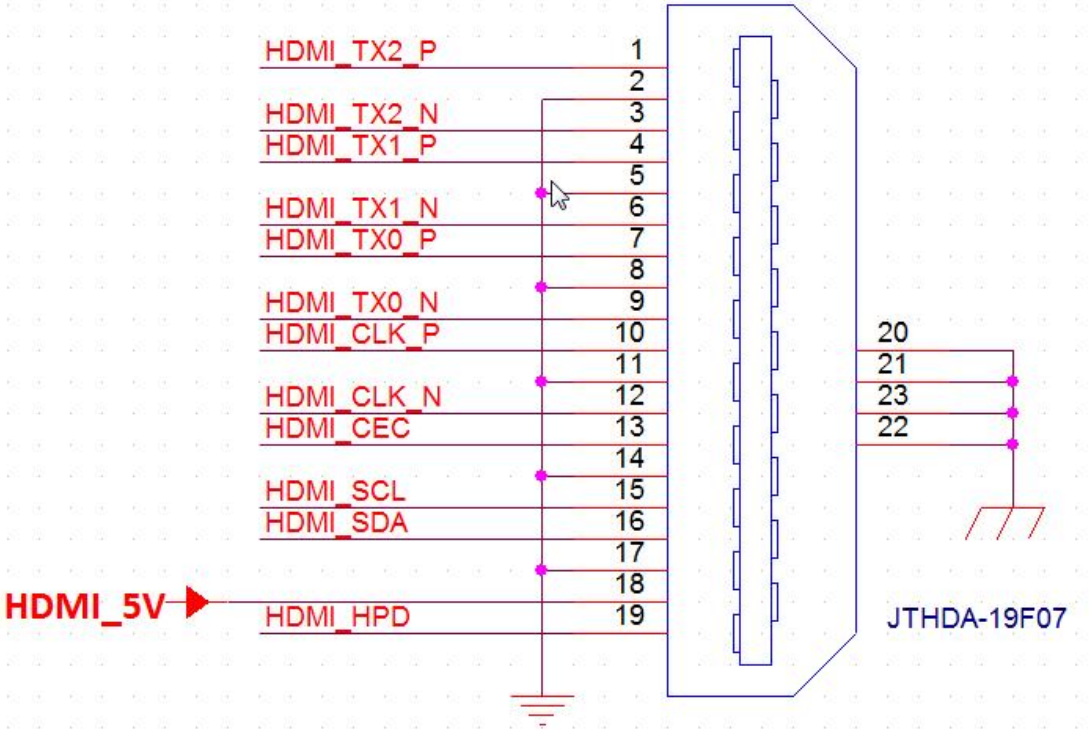
6.6. Micro SD Card

It is strongly recommended that use the power source VSD_3V3 output from Pin 75 of CN1 to power the Micro SD Card, and VSD_3V3 DO NOT use to power other devices. The voltage level of VSD_3V3 will change from 3.3V to 1.8V when high speed card inserted. Note that ESD circuit is needed for reliable application.



6.7. HDMI

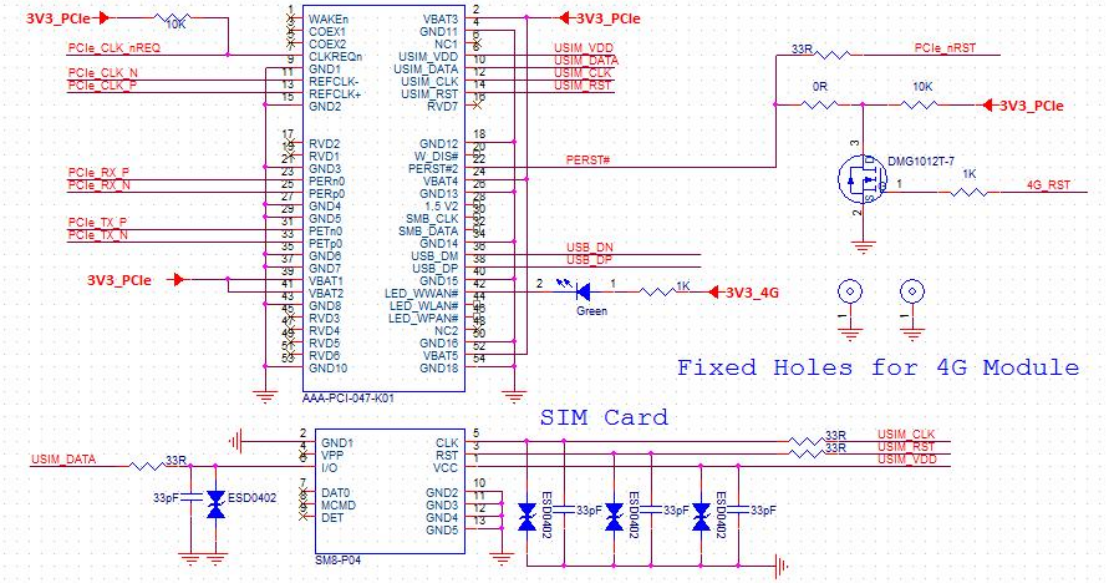
HDMI circuit as following:
Note that ESD is not needed because the ESD circuit has been integrated on SoM



6.8. Mini PCIe

The following circuit demonstrates how to connect to mini PCIe connector via PCIe and USB bus.

You can easily extend 4G application via mini PCIe 4G module.



Note that 0.1uF AC coupling capacitor has been intregrated on SoM board for these signals:

PCIe_CLK_P
PCIe_CLK_N
PCIe_TX_P
PCIe_TX_N
External 0.1uF AC coupling capacitor is needed on base board when directly connecting PCIe device for these signals:
PCIe_RX_P
PCIe_RX_N
